5	**Kejdi Vrapi**	**8**	**7**	**7**	Front-end developer
6	**Erban Danaj**	**7**	**5**	**7**	Front-end developer

(Explanation: * The grading given is from 1-10)

2. Evaluation of the team leader

Kristian Sota was an excellent team member. He had the desire and the ambition to complete this project. He put fully his contribution on the diagrams, structure and of course implementation of our project. Great team-working skills. Motivated the team members to work more.

Renato Muho gave all his best in this project. Always wanting to help and contribute to the team, even though some tasks might have been harder for him, but he still took them and delivered. He helped the team in every aspect from documentation, strategy and implementation.

Silvio Talelli was the designer of our team. He did a great job delivering what was given to him. Always with a great motivation, he completed his duties and contributed to the team mood.

Kejdi Vrapi did what was given to him. He worked well and completed the job in time. The diagrams and the front-end development that was assigned to him were finished in time.

Erban Danaj was aware of his abilities and how could he help the team. Considering his skills, he organized meetings, held reports and checked the team deadlines. He was great having around.

3. **Work done by me**

Being the leader of the group, I wanted to motivate every member of the group, so they can really learn from this team-working experience that many of us are going to face in our career. By learning how to work in a team, we gain some special skills that are very needed in this industry.

The tasks were distributed beforehand. I wanted to follow agile methodology, so we organized meetings and the tasks were given with a deadline.
All members were given tasks based on their abilities.

I did the documentation of the project, giving the main contribution in diagrams along with Kristian. Kristian and I handled the core part of the code such the backend and implementation technology.
